

SpeedUp Mac

Version 3.0.0.5

Installation Guide

Overview

As you use your computer system, number of unwanted Apps, large files that are no more needed, old files, cache files downloaded while internet surfing, widgets, plug-ins, and many more keep growing inside the hard drive. These files eat up your valuable drive space, and hamper system speed and performance.

SpeedUp Mac can efficiently remove all unwanted applications and files from your Mac system. Large sized old files, duplicate files, universal binaries, cache files, etc. are effectively deleted releasing drive space. The application can also work as an Uninstaller that removes all avoidable applications, widgets and plug-ins from the system. In addition, **SpeedUp Mac** enables its users to backup files as zip files before removing them from the hard drive. You can also remove login items through this application. SpeedUp Mac is a complete booster for your Mac system.

Main User Interface

Key Features:

- New and enhanced GUI.
- Two new scan options - Quick and Strict scans, added to Duplicate Files module.
- Removes system junk and unwanted files quickly.
- Generates free space in drive volumes by removing unnecessary files and applications.
- Enhances hard drive performance.
- Uninstalls application by drag and drop feature.
- Updated Ignore List.
- Updated Advance Preference.
- Preview of drive scan result through Quick Look  option.
- Tasks can be scheduled to execute at a preset time.
- Attractive and user-friendly graphical interface.
- Allows setting up of preferences for SpeedUp Now  activities.

Why SpeedUp Mac?

Enhances Mac System Performance

Removing unwanted files from system boot Volume provides free space and increases performance.

SpeedUp Now  feature of SpeedUp Mac helps you to recover drive space by deleting unused large files, duplicate files, unusable part of universal binaries, and many more.

Generates Free Space in Boot and other volumes

SpeedUp Mac allows you to select a volume and delete unnecessary files from them. In a Mac with a single volume, the boot volume is automatically selected and you can remove the unnecessary files from it and in multiple volume Mac, Custom Scan (Other Volumes) option shows all the other volumes including attached external storage devices, if any. Removal of unwanted files will generate free space in the volumes.

Uninstalls Applications

Uninstaller allows you to uninstall unused applications by drag and drop method. You need to drag the application into the **Uninstalled Dragged App** area which creates a tree of the application showing all the supported files. You can access the **Uninstaller** icon on the screen.

Removes Widgets

Widgets take up lot of space eventually slowing down system performance. Some widgets keep on running even when you're not using your dashboard. So it's always better to keep your widgets cut down to only what you're actually using. Uninstaller in **SpeedUp Mac** lists all the downloaded widgets and helps you to easily get rid of the unnecessary widgets.

Uninstalls Plugins

Plug-ins are a set of software components that adds specific capabilities to a larger software application. These add-ons may be automatically downloaded without your knowledge and take up drive space. Removing plugins will provide free space. So it is advisable to delete plug-ins. Uninstaller scans entire drive and list out all plug-ins, thus enabling you to delete the unwanted ones.

Removes Login Items

When you login to your computer, few items start automatically. **SpeedUp Mac** enables users to remove login items thereby decreasing booting time and enhancing the performance of your Mac.

Personalized Preferences

Preferences can be set for **SpeedUp Now** feature of the application. The set preferences are checked at the time the application starts execution and the tasks are performed according to the set preferences.

What is New in This Version?

SpeedUp Mac has the following new features:

- Find duplicate files for iTunes, iWork, iPhoto, Aperture and iMovie.

In addition to previous features mentioned below:

- Option to remove login items.
- Two new scan options - Quick and Strict scans, added to Duplicate Files module.
- Two new scan options - Recommended Scan for boot (single) volume and Custom Scan (multiple) for non bootable volumes.
- Removes system junk and unwanted files quickly.
- Generates free space in drive volumes by removing unnecessary files and applications.
- Enhances hard drive performance.
- Uninstall application by using drag and drop feature.
- Preview of drive scan result through Quick Look  option.
- Tasks can be scheduled to execute at a preset time.
- Attractive and user-friendly graphical interface.
- Allows setting up of preferences for SpeedUp Now  activities.

Installation Procedure

Before installing the software, ensure that your system meets minimum system requirements.

Minimum System Requirements

- **Operating System:** Snow Leopard 10.6 up to Mavericks 10.9 and above
